

Sustainable Design ENERGY EFFICIENCY SERVICES

As businesses and industries continue to look to save costs, energy efficiency has become a primary means to this end. The long term energy savings from installing high efficiency heating, cooling, lighting, and other building and process systems can often have a short return on investment. There are a number of rebate programs, tax incentives, and low interest loan opportunities that make upgrading existing systems or installing high efficiency systems even more appealing. In addition to the economic benefits of these systems, they reduce overall energy use, therefore having a positive effect on the environment.

The mechanical engineering, electrical engineering, and community resources planning staff at I&S Group provide a number of services related to energy efficiency.

- » Energy Efficiency Rebate Analysis
- » Commercial Energy Audits
- » Geothermal Analysis
- » Commissioning
- » LEED Design Services
- » USDA REAP Energy Audits

If you have any questions or would like to learn more about how we may be able to assist you, please do not hesitate to contact us.
