

Workplace safety and quality of workmanship are critical not only to your employees, but also to the contractors and outside consultants you hire. I&S employees are trained in workplace safety, regulatory issues, and quality control. To demonstrate this, I&S is certified as an ISNetworld member contractor. This rigorous certification is an industry standard that gives owners assurance that the contractors they hire meet the same high standards as their employees.

ISNetworld provides verification on a wide variety of workplace standards including written safety programs, training documents, insurance certificates, and accident records. Additionally, third party verification is provided on drug and alcohol testing, training, and audits. This program is used by many national and international companies for contractor procurement including Koch Industries, Bristol-Myers Squibb, Williams Pipeline, and BP.

This certification not only provides you confidence in the training of our staff, but it also streamlines the procurement process. We have staff certified to perform civil design, environmental design, surveys, field inspections, and compliance checks, and ready to perform these services without delay. We are currently certified in these categories, and are able to quickly gain additional certifications as necessary.
