

# HEALTH CARE MINNESOTA VALLEY HEALTH EMERGENCY SERVICES ADDITION

Le Sueur, Minnesota

With the rapidly changing landscape in health care, Minnesota Valley Health Center is determined to continue to provide outstanding local health care with regional access to specialty care. One of the primary areas of improvements identified in an earlier master planning document prepared by I&S was the renovation of the emergency services area of the facility.

The existing emergency facilities lacked privacy, had poor circulation for staff and families, and had ambulance facilities located some distance from the emergency services area. The revised plan, designed to integrate with future clinic and main entrance improvements, included a new ambulance bay, waiting and reception areas, and improved circulation.

The improvements also allowed for a consolidation of administrative offices in a previously unfinished lower level. Full buildout of this space into a cost effective and comfortable office space was included in this project.

Site improvements included the addition of convenient and accessible parking, stormwater infiltration areas, and coordination with the existing helipad.
