

Religious ST. JOSEPH THE WORKER CATHOLIC CHURCH

Mankato, MN

The main design objective was to provide additional gathering space for the congregation. I&S worked with members of the congregation on several options for expanding the Narthex; including an addition to the South.

I&S provided multiple schematic designs of the options and prepared presentation boards for the members to review. I&S also provided a 3-D walk through animation of the addition/renovation.

Design limitations include: that we maintain the ceiling height, provide an accessible restroom, add plumbing fixtures 150'±™ from the nearest existing fixtures, properly condition the space, keep existing columns, keep within the existing city easements and keep within the existing canopy.

I&S provided the following services:

- » Architectural Design
- » Interior Design
- » Structural Engineering
- » Mechanical Engineering
- » Electrical Engineering
