

TRANSPORTATION ENGINEERING

Transportation networks have a tremendous impact on the movement of people and goods between and within our communities. The quality and value of our transportation systems influence our communities' economic viability, quality of life, environmental health and future development. At ISG, we work closely with our clients to engage and truly listen to community members, officials, and other stakeholders to fully understand their needs, desires and goals and meet them with safe, efficient and robust solutions. We plan, design, administer construction and assist in maintaining a variety of transportation systems including streets, highways, bridges, trails and traffic control systems. Our multi-disciplinary team of experts is well versed in local, state and federal funding mechanisms and project development processes.

ISG has comprehensive experience with all major transportation systems:

- Highways
- Streets
- Bridges
- Roundabouts
- Trails
- Railways
- Intermodal Facilities
- Roadside Facilities
- Public Facilities

EXPERT SERVICES

- Traffic Engineering
- Construction Administration
- Transportation Planning
- Environmental Compliance
